

Intake & Case Management System for Childcare Providers

A powerful tool to build relationships & reduce paperwork.

A PAPERLESS SYSTEM IT'S POSSIBLE!

With licensing requirements increasing and long-term storage becoming the norm, paperless systems are crucial for your childcare environments.

ICMS, a customizable childcare app, was designed side-by-side with childcare workers. This intuitive system simplifies the manual intake processes, so you have more time to grow relationships.

With ICMS, your childcare center eliminates the need for paper documents by handling intake and discharge, scheduling, stay information, and reporting in one easy-to-use app.

What is ICMS?

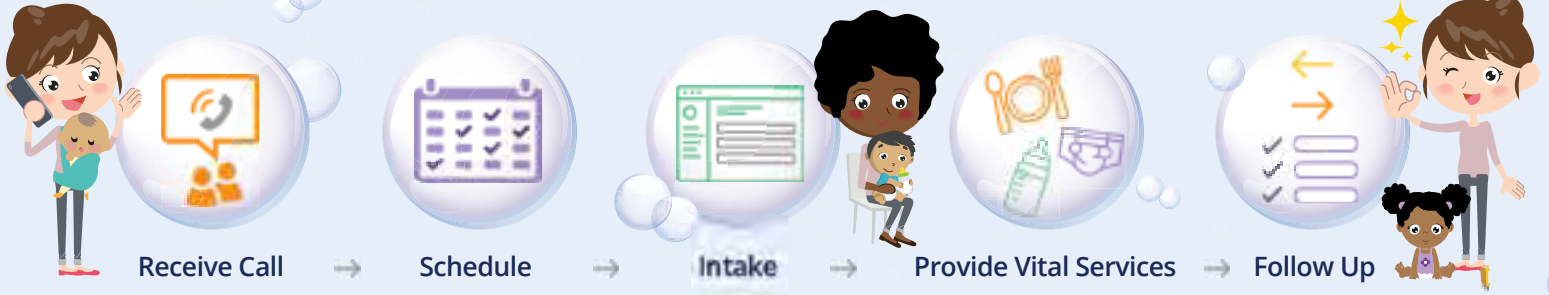

A child's stay at a nursery or daycare is anything but predictable. Generally, it starts with a check-in process including special notes and concerns from the parent, followed by a stay packed full of activities, and ends with the child's safe return to parents. But, despite routine, each child's day is different. With the easy-to-use ICMS app, you can accurately record these details in real-time.

With ICMS data tracking, the unique story of a child's stay is tracked in an app that provides accurate and timely data and reports for caregivers and parents. As a bonus, it simplifies state-mandated reporting. Your caregivers can reduce time spent on paperwork and instead focus on providing the best childcare possible.

Curious what **ICMS** can do for your nursery or daycare? Contact IntelliTect at icmsinfo@intellitect.com

From child care centers or in-home daycares to crisis nurseries and beyond, ICMS is designed for childcare providers in many settings. ICMS will help you turn your focus from tedious paperwork to life-giving relationships.

Calls and Scheduling

Organize and catalog all calls received in an easy-to-use format. Stay in compliance with staff-to-child ratio by viewing real-time staff availability. See who is coming, who is already here, who will be leaving, and who has recently left.

Intake & Discharge

Once and done! Information is gathered during the child's first visit then saved and confirmed during future visits. Checking in and out is a breeze with a list of current kids and their pick-up information.

Status Board

This large television is an important safety feature that limits risk and displays vital information on children via easy to recognize icons that denote needed medications, allergies, and other pertinent information.

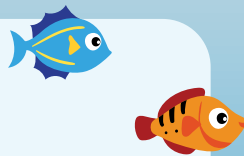

Meals, Feedings, Activities, Medications, and Diapers

Record, review, and modify notes and daily activities at the click of a button. Quickly and accurately view which child has allergies (and what type).

Follow Up and Family Records

Stores up-to-date information on each family's children and allows for ongoing notes on staff interactions.

"I wanted to let you know how incredible IntelliTect has been to work with. The solution that Grant and his team built has completely transformed the way the Nursery operates in such an awesome way."
